6th June

GAS TO POWER EUROPE

- Electricity demand and ageing of existing facilities drive new generation capacity development
- Environmental policies favour gas & renewables
- CCGTs are “easy” and “complex”
- Prices are now a concern
- Items for security of supply:
 - Diversification (origins, gas infrastructures generation mix)
 - Participation throughout the gas chain

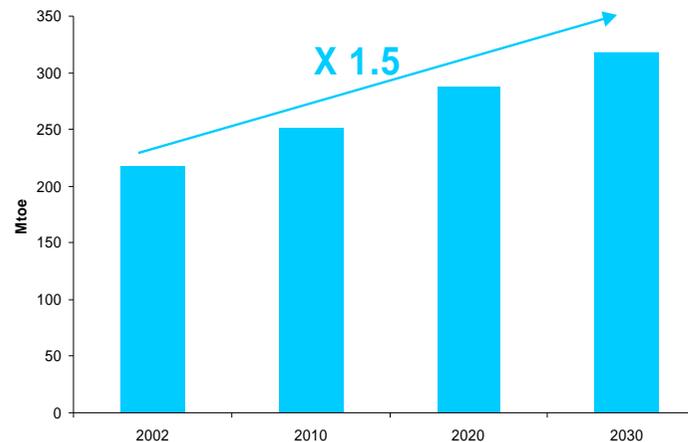

Electricity demand and ageing of existing facilities drive new generation capacity development

World Electricity demand (2002-2030)

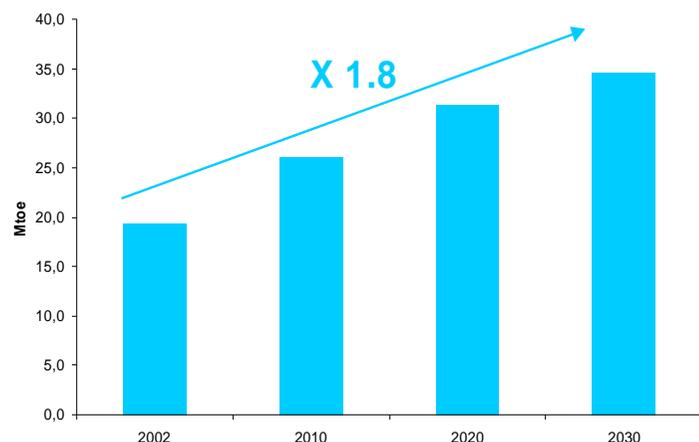

Source: IEA

European Electricity demand (2002-2030)

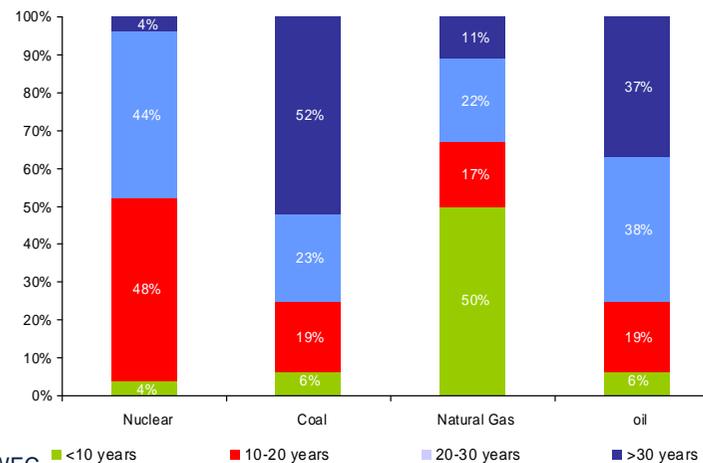

Source: IEA

Spanish Electricity demand (2002-2030)

Source: EU, MITyC

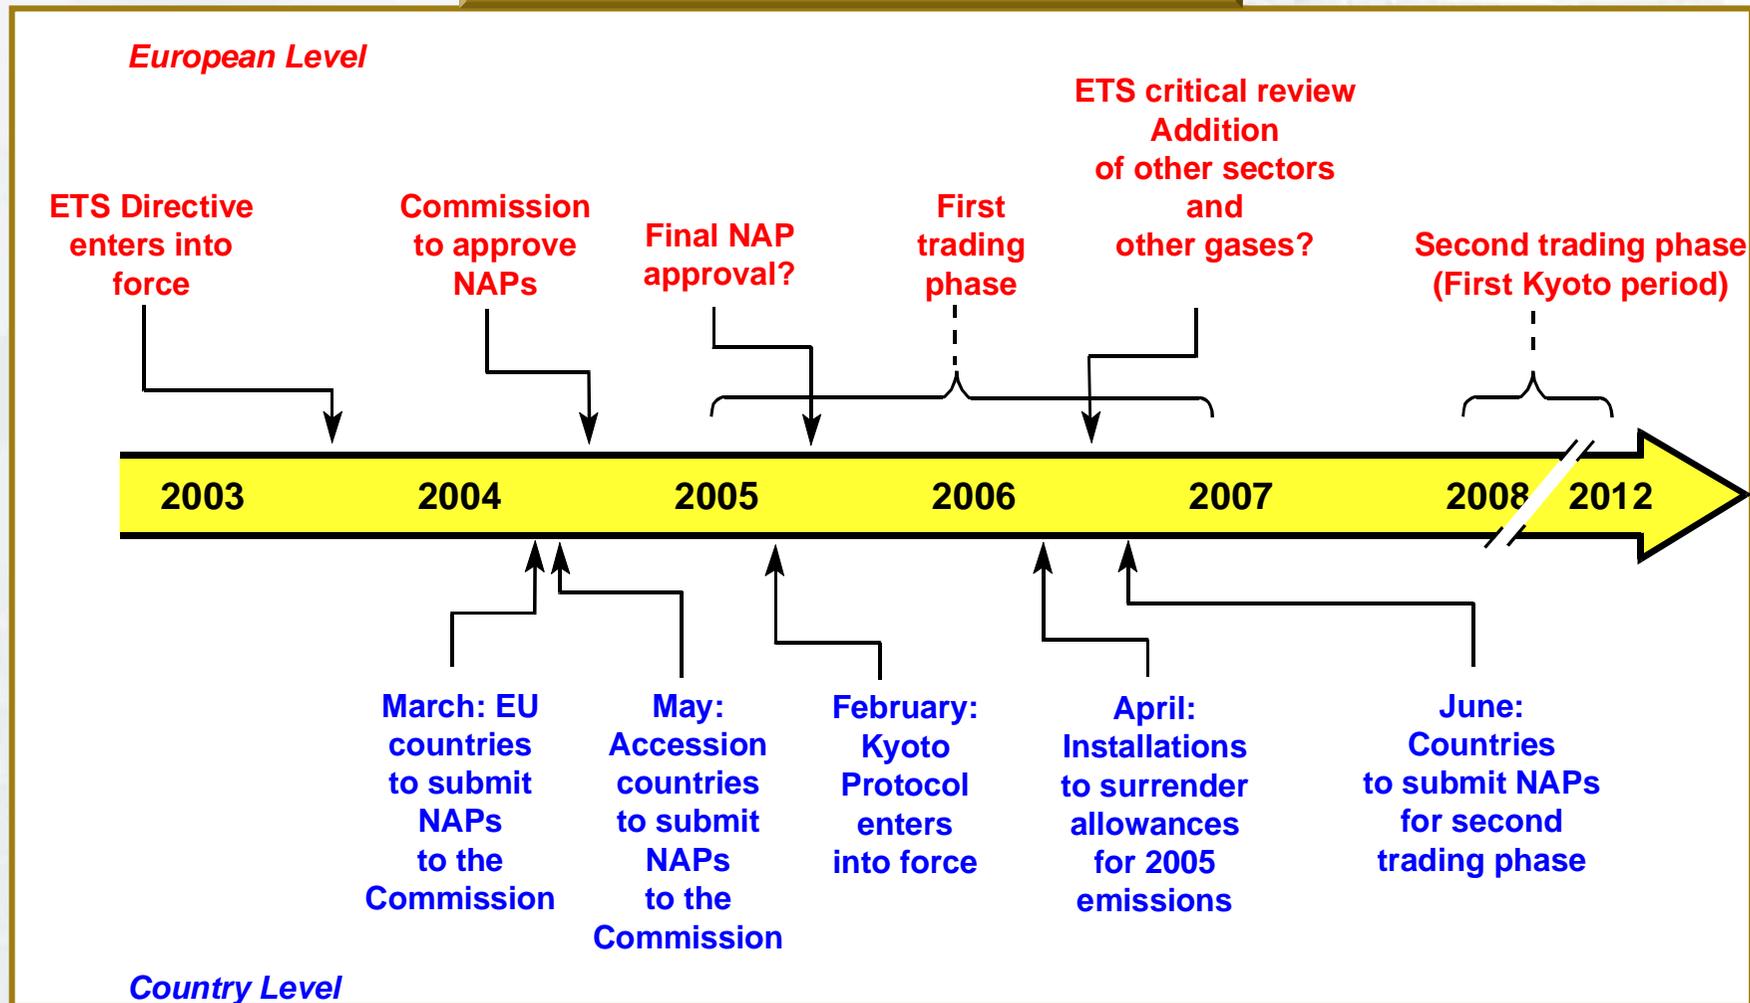

Age of generation facilities EU 29

Source: WEC

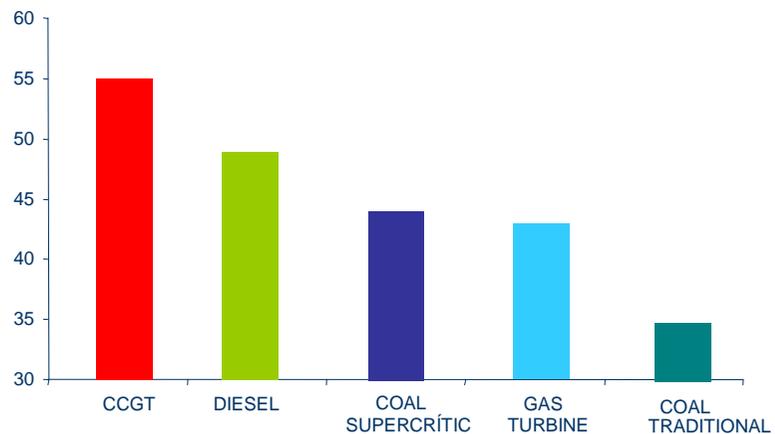

Environmental policies favour gas & renewables

Kyoto Protocol Process

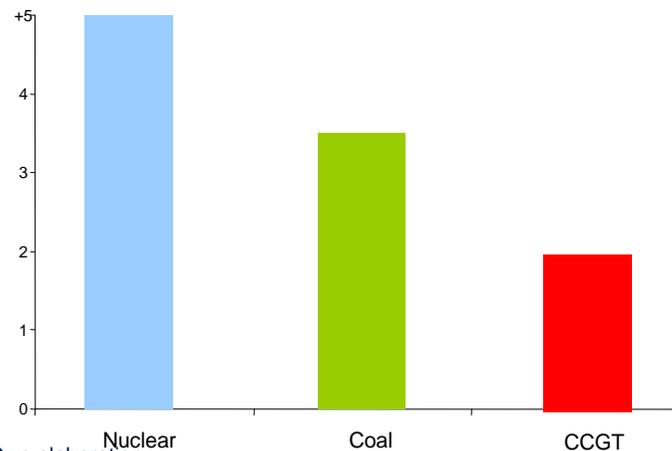

CCGTs are “easy”

Energy Efficiency (%)

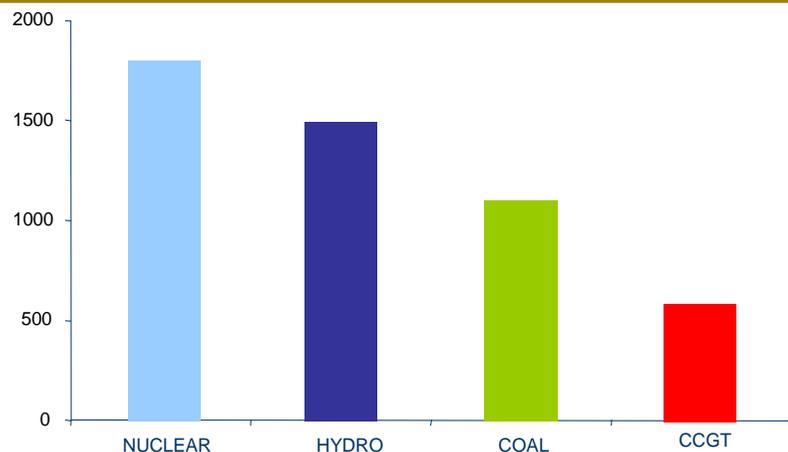

Source: Own elaboration

Estimated construction period (years)

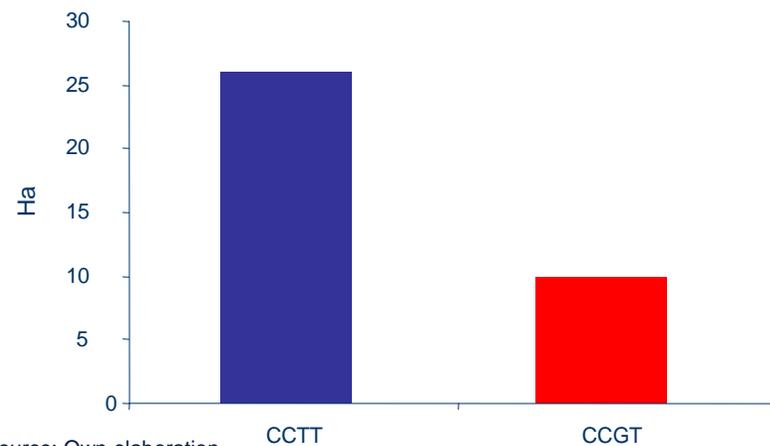

Source: Own elaboration

Typical Investment (€/kW)

Source: Own elaboration

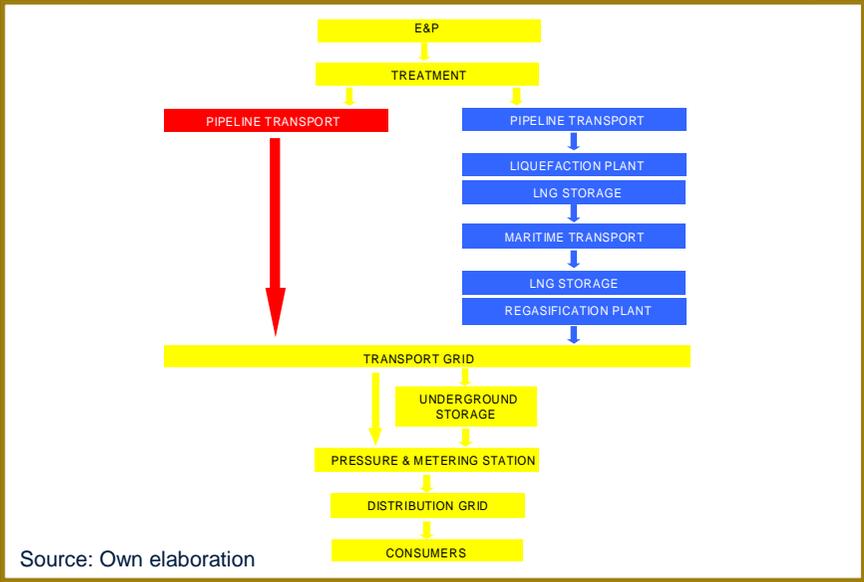

Land requirement (Ha)

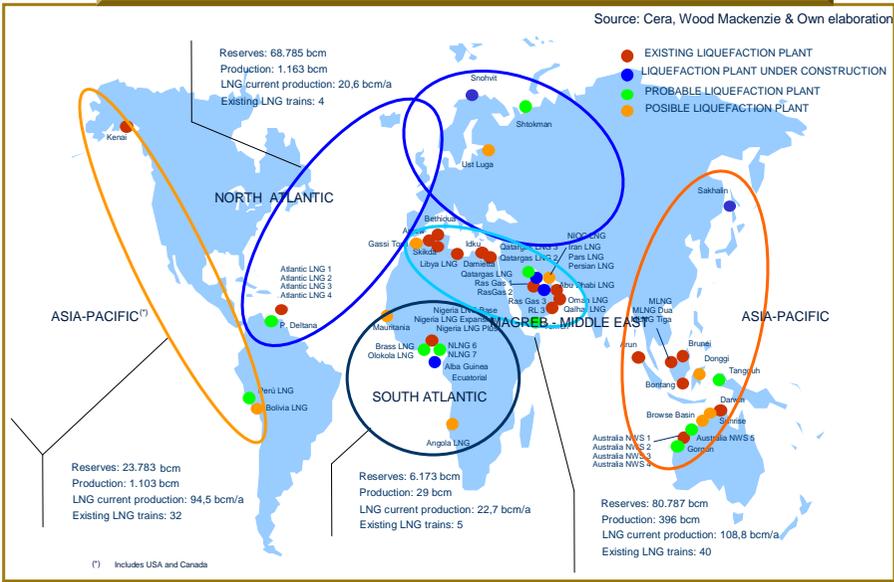

Source: Own elaboration

CCGTs are "complex"

NG & LNG Chains

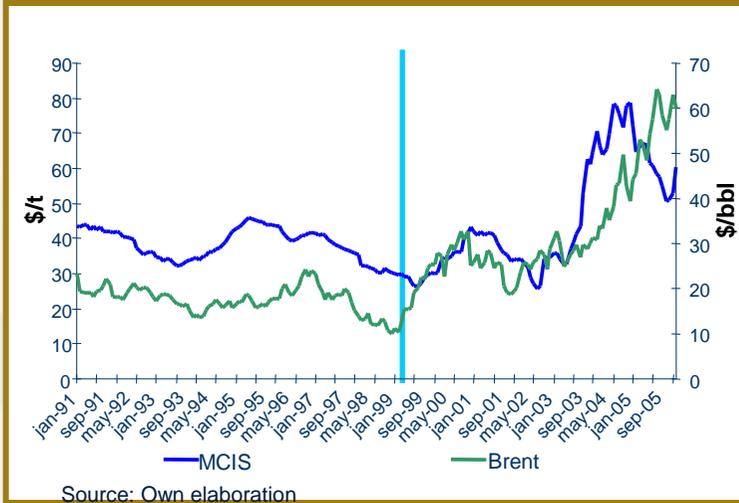

International gas markets

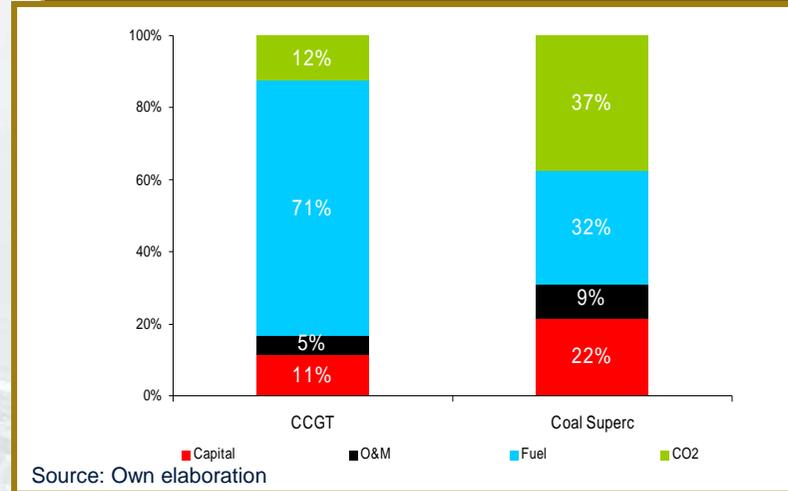

Prices are now a concern

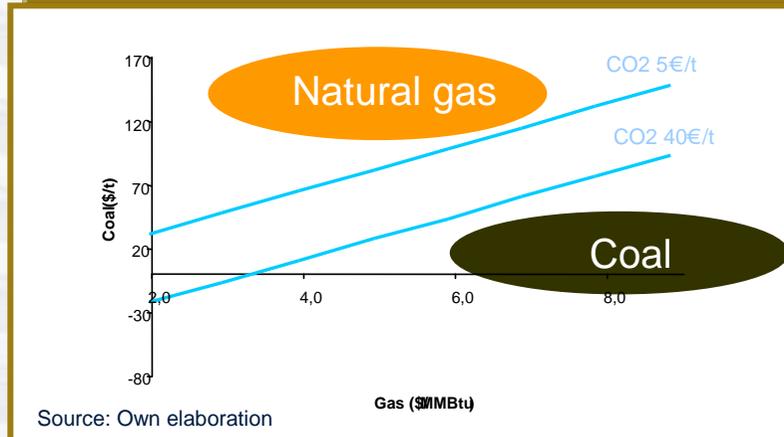

Brent and MCIS price evolution

Generation cost structure (high prices scenario)

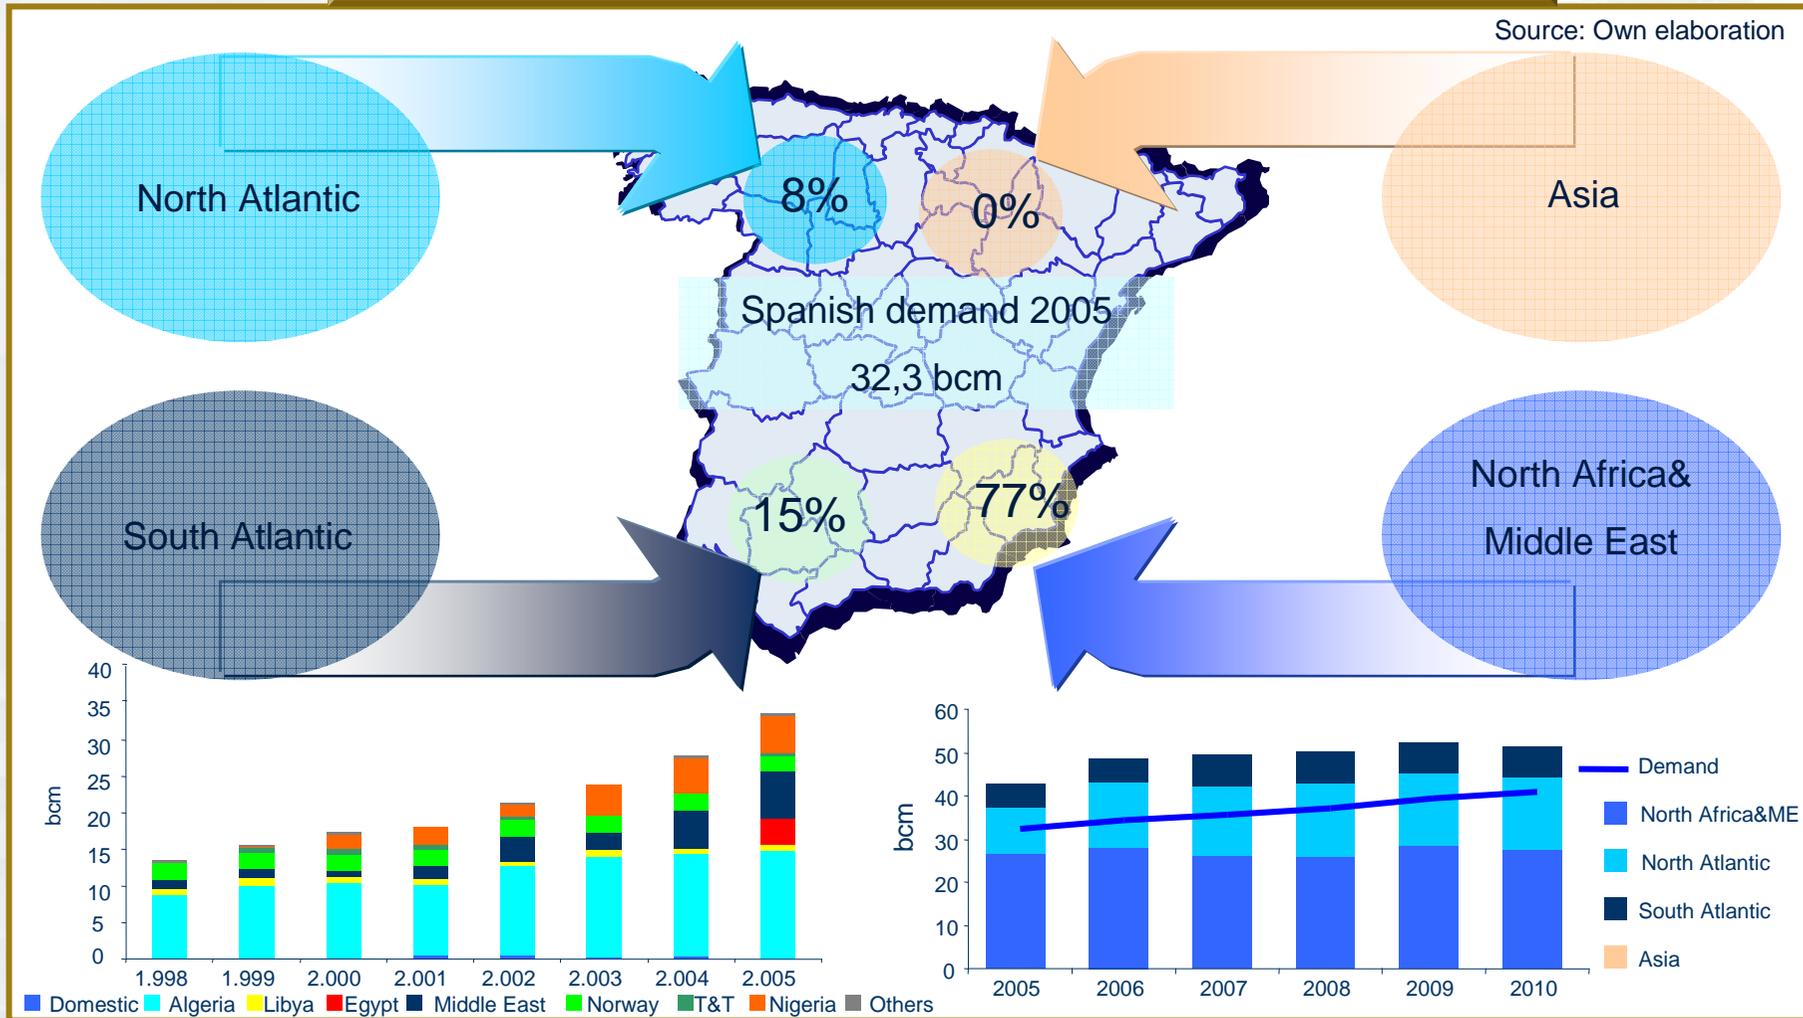

Indicative relationships gas, coal, CO₂.

Items for security of supply: Diversification (origins, infrastructure gen.mix)

Natural Gas supplies to Spain

Source: Own elaboration

Items for security of supply: Participation throughout the gas chain

An aerial photograph of an offshore oil platform in a harbor. A large tanker ship, the 'BRAGLIA SVETI', is docked at a pier. The platform has several tall towers and a complex network of pipes. In the background, there are other smaller structures and a crane. The water is dark, and the sky is overcast. The image has a semi-transparent circular graphic overlay on the left side.

Thank you for your attention
