Remarks & Key Assumptions

This section is intended to provide additional information as a reference ONLY on the properties/characteristics of natural gas, liquefied natural gas (LNG) and liquefied petroleum gas (LPG) for background understanding.

The approximations in the tables in Section 2 and Section 3 are based upon the following assumptions:-

- (i) For natural gas:
 - "Gas State" in conversion tables is assumed at Normal, N (0 °C, 1 atm)
1,100 Btu/scf (60 °F, 1 atm) = 1,163 Btu/cf (0 °C, 1 atm)
*Scf = Standard cubic feet. Standard means "(60 °F, 1 atm)"
- (ii) For LNG
 - 1 tonne LNG = 1,300 Nm³ gas [*N: Normal. Normal means "(0 °C, 1 atm)"];
 - Density = 450 kg/m³ LNG
- (iii) For LPG,
 - An assumed 50/50 propane/butane mixture with (*r*) and (*p*) indicating that the LPG is either refrigerated or pressurised.
 - The simulation software known as "Virtual Materials Group (VMG) Process Simulator" is used in the process. Other assumptions are as below:-
 - Pressurised (*p*): temperature = 20 °C, Vapour Fraction (VapFrac) = 0
 - Refrigerated (*r*): temperature = each boiling point, Pressure = 0 kPa (g), g = gauge pressure

Corresponding boiling points -> Ethane : -88.7 °C

Propane : 42.2 °C

n-Butane : -0.6 °C

C₃,C₄ mix : -29.2 °C

(iv) Calorific values, mmBtu (gross):

	mmBtu/tonne (gross)	mmBtu/bbl	mmBtu/m ³
LNG	53.4	3.82	24.0
LPG (<i>r</i>)	47.3	4.52	28.5
LPG (<i>p</i>)	47.3	4.13	25.9
Oil	39.68	5.80	
Coal	27.3		

(v) 1 tonne of oil equivalent (toe) = 41.868 GJ = 39.68 mmBtu

(vi) 1 barrel of oil equivalent (boe) = 5,800,000 Btu = 5.8 mmBtu

The tables contain quick reference equivalents and other factors of general relevance to the natural gas industry. All figures are to be taken as APPROXIMATE VALUES only for use when a high degree of precision is not required. The approximations in these tables are based upon the assumptions that are listed in pages 16 and 17.

IGU

The International Gas Union (IGU), founded in 1931, is a worldwide non-profit organisation promoting the political, technical and economic progress of the gas industry with the mission to advocate for gas as an integral part of a sustainable global energy system. IGU has more than 110 members worldwide and represents more than 95% of the world's gas market. The members are national associations and corporations of the gas industry. The working organisation of IGU covers the complete value chain of the gas industry from upstream to downstream. For more information please visit www.igu.org.
