Pierre M.G. Bartholomeus

DNV KEMA

Global Director

Senior Vice President

Gas Consulting & Services

Netherlands

How to transform the existing energy system into an ecological sustainable and economical future energy system?

“Gas enables flexibility, sustainability and will play a crucial role in the future global energy system.”

Sven Becker

Trianel

Managing Director

Germany

**“The age of the renewables –
natural gas will make it happen”**

Tobias Münchmeyer

Greenpeace

Deputy Head of Political Unit

Germany

“Natural gas is the cleanest of all dirty fossil fuels. Therefore it is not part of the solution, but the ultimate bridge to reach the solution.”

Rafael Senga

WWF

Energy Policy Manager

Philippines

“WWF believes it is technically and economically feasible to achieve a 100% renewable energy supply globally by 2050.....is natural gas still a transition fuel towards that vision?”

Samir Succar

Natural Resources Defense

Council (NRDC)

Staff Scientist

United States

“Policies that promote the aggressive pursuit of energy efficiency and the rapid deployment and integration of renewables will be essential for making sustainable growth and environmental sustainability mutually reinforcing ideals.”

Masaki Tsukuda
Tokyo Gas
Assistant Manager
Japan

**„Accelerate the introduction of
renewable energy
Focus on efficiency
->Use natural gas!“**

Marc Hall
Bayerngas
CEO
Germany

bayerngas

“So far no optimal technology and solution for the perfect interaction of production, distribution and consumption of energy is available. Therefore an open dialogue about technological progress is necessary!”
