

Smart Gas Meters in Iran

By: B. Babazadeh, M. Sheikhbahae (NIGC)

Date: Tuesday, 5th June, 2012

Venue: Room 302/3

Patron

Host

Host Sponsor

NIGC (National Iranian Gas Company)

No. of consumers	15000000
No. of cities use Natural Gas	919
No. of villages use Natural Gas	12267
No. of industrial consumers	5000
No of power plants using natural gas	65
Natural gas volume consumed per day	500000000 m ³

Gas metering: Traditional method

The disadvantages of current gas meters

- The vulnerability of the moving mechanical parts to shock, expansion and contraction due to temperature variation
- Difficulty in reading due to figures' fading, glass opacity, and aluminum palette removal
- Gas leakage from the body, under the counter, and inlet/outlet of the meters' throat
- Meter tampering
- Human error and related problems

Objectives

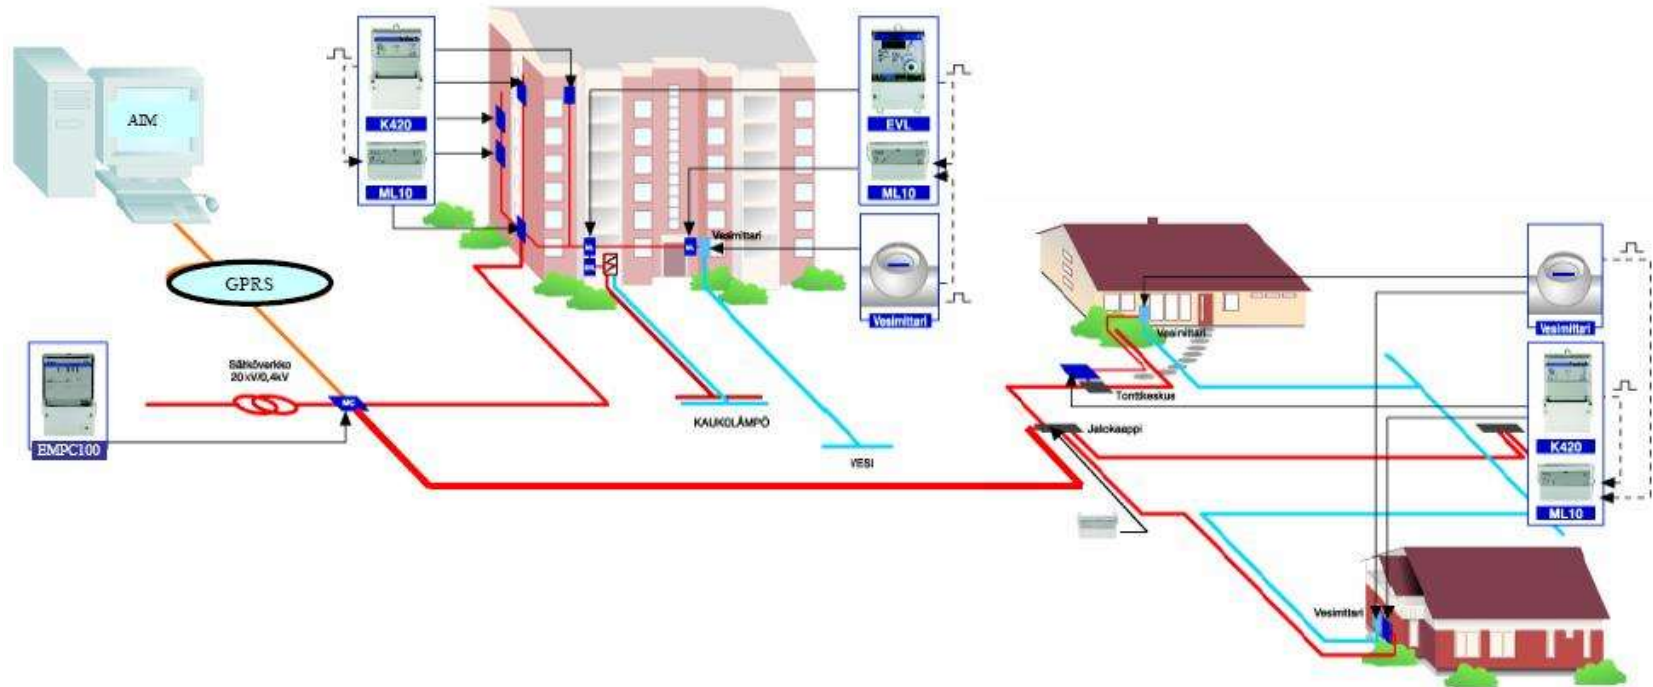

- Tempering Prevention
- Elimination of the gas meter reader to visit the customers' residence
- Human reading error elimination
- Gas distribution automation infrastructure
- Nationwide daily consumption database
- Consumption planning infrastructure
- On-line billing
- Gas meters diagnostics and maintenance

Smart metering for residential consumers (AMR/AMI)

- Bi-directional meter communication (Two-way)
- Possible network communication scheme between the meters and the data collector
- Radio Channels
- Electricity distribution network
- Telephone lines

Application of Remote Gas Meter Reading System

In this system, mechanical data of the gas meter is converted into digital data via an encoder installed on the meter. Next, through a communication route the digital data is converged and transmitted to the desired destination.

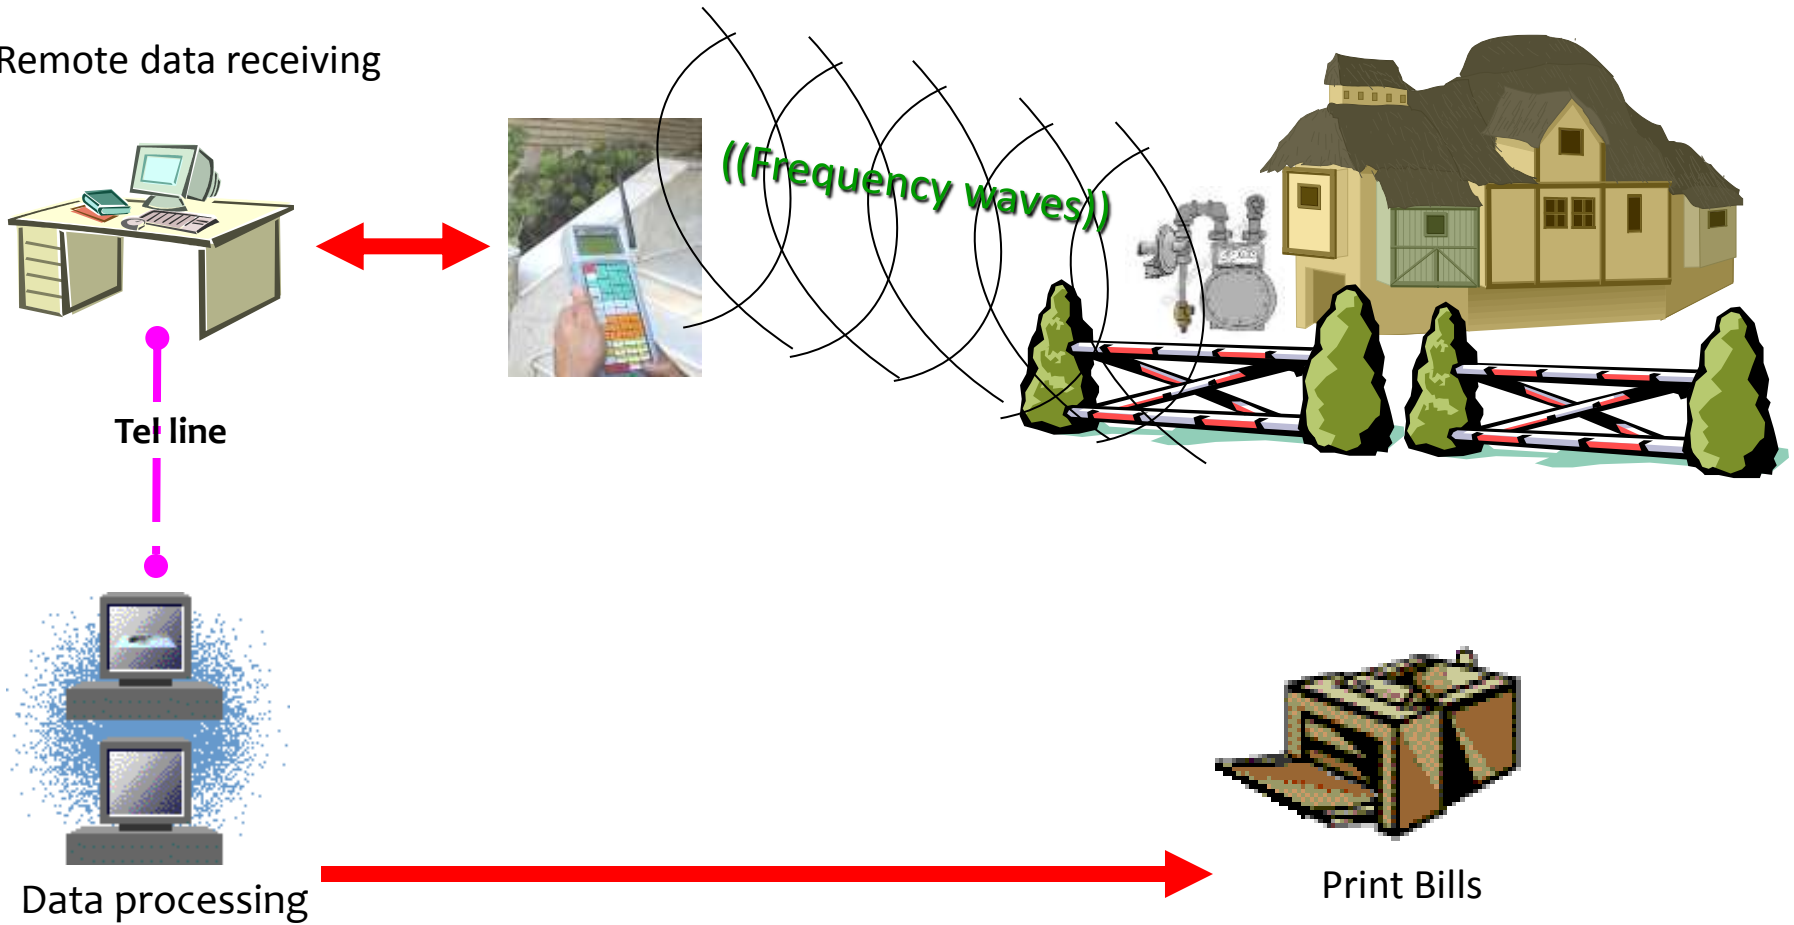

Technical and economical benefits of Remote Gas Meter Reading System

- Meter reading error exclusion
- Exclusion of reading inconveniences (barriers, customer absence, ...)
- Fast & instant reading
- Accurate consumption computation via temperature conversion
- Encoder utilization and minimizing meter mechanical error
- To enable customer to analyze metering, consumption and billing (Energy management)
- Social security assurance
- On-line billing
- Illegal consumption detection

Gas metering: Walk-by

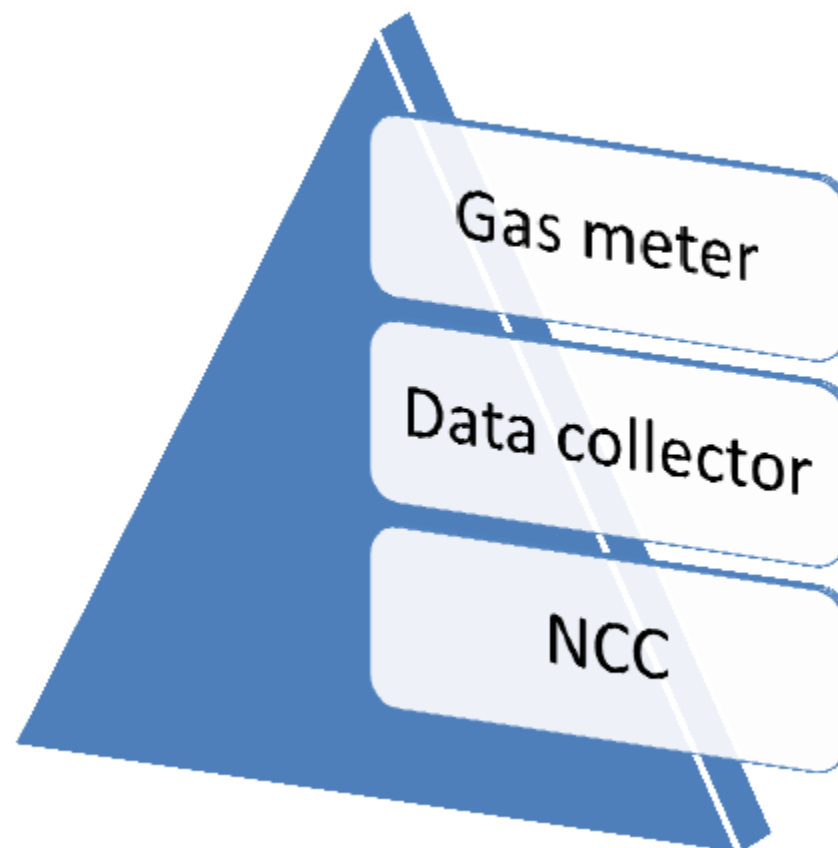

Remote data receiving

Gas metering: Fixed network

The components

Ordinary & Smart Gas meter

Ordinary gas meter

Smart gas meter

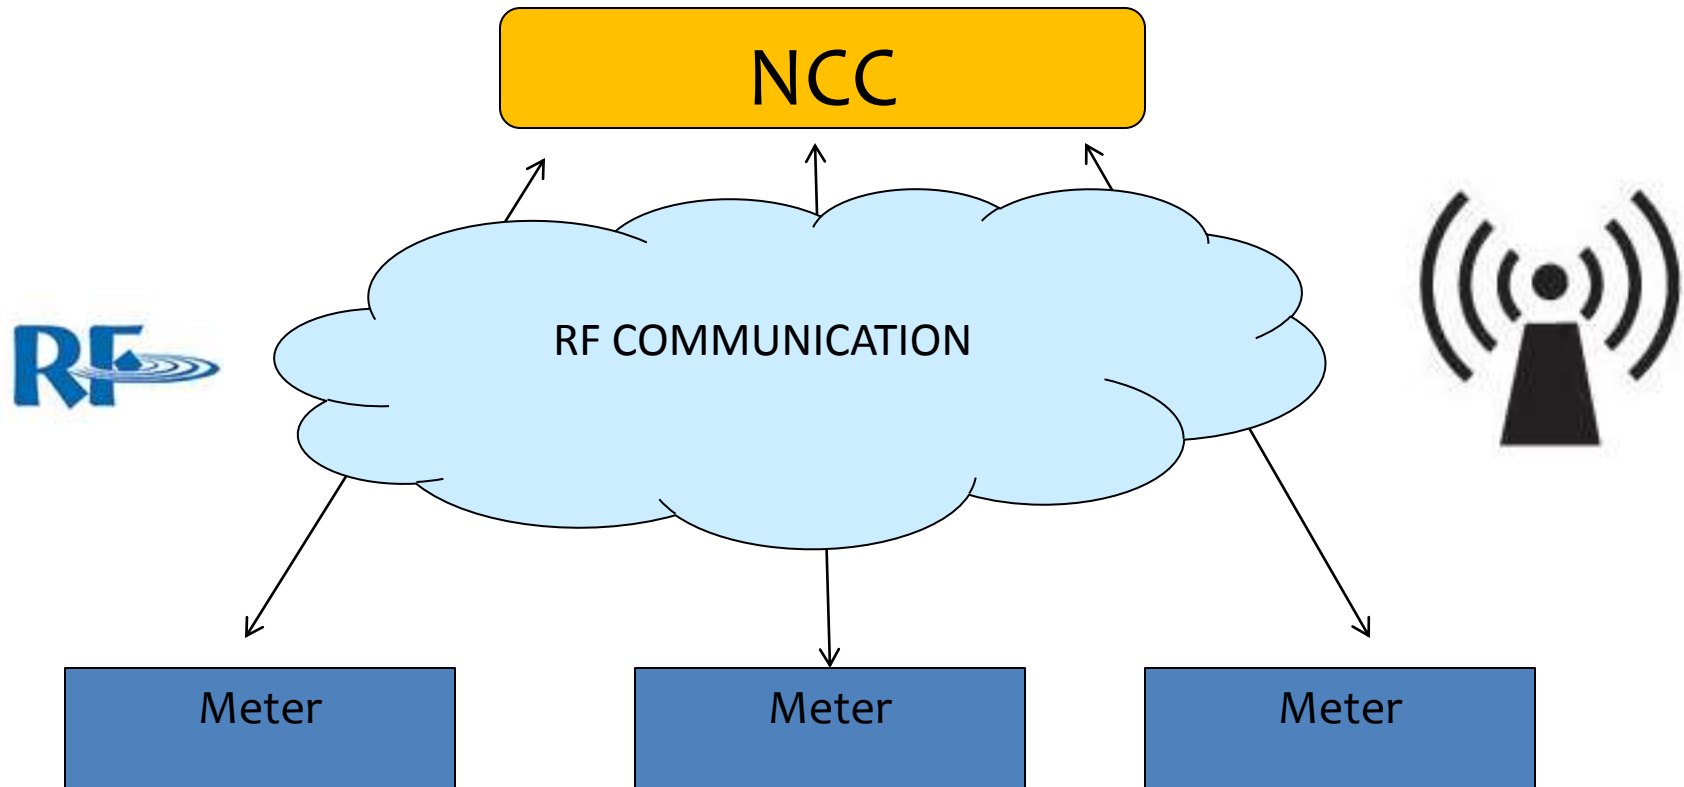

Data collectors (DC)

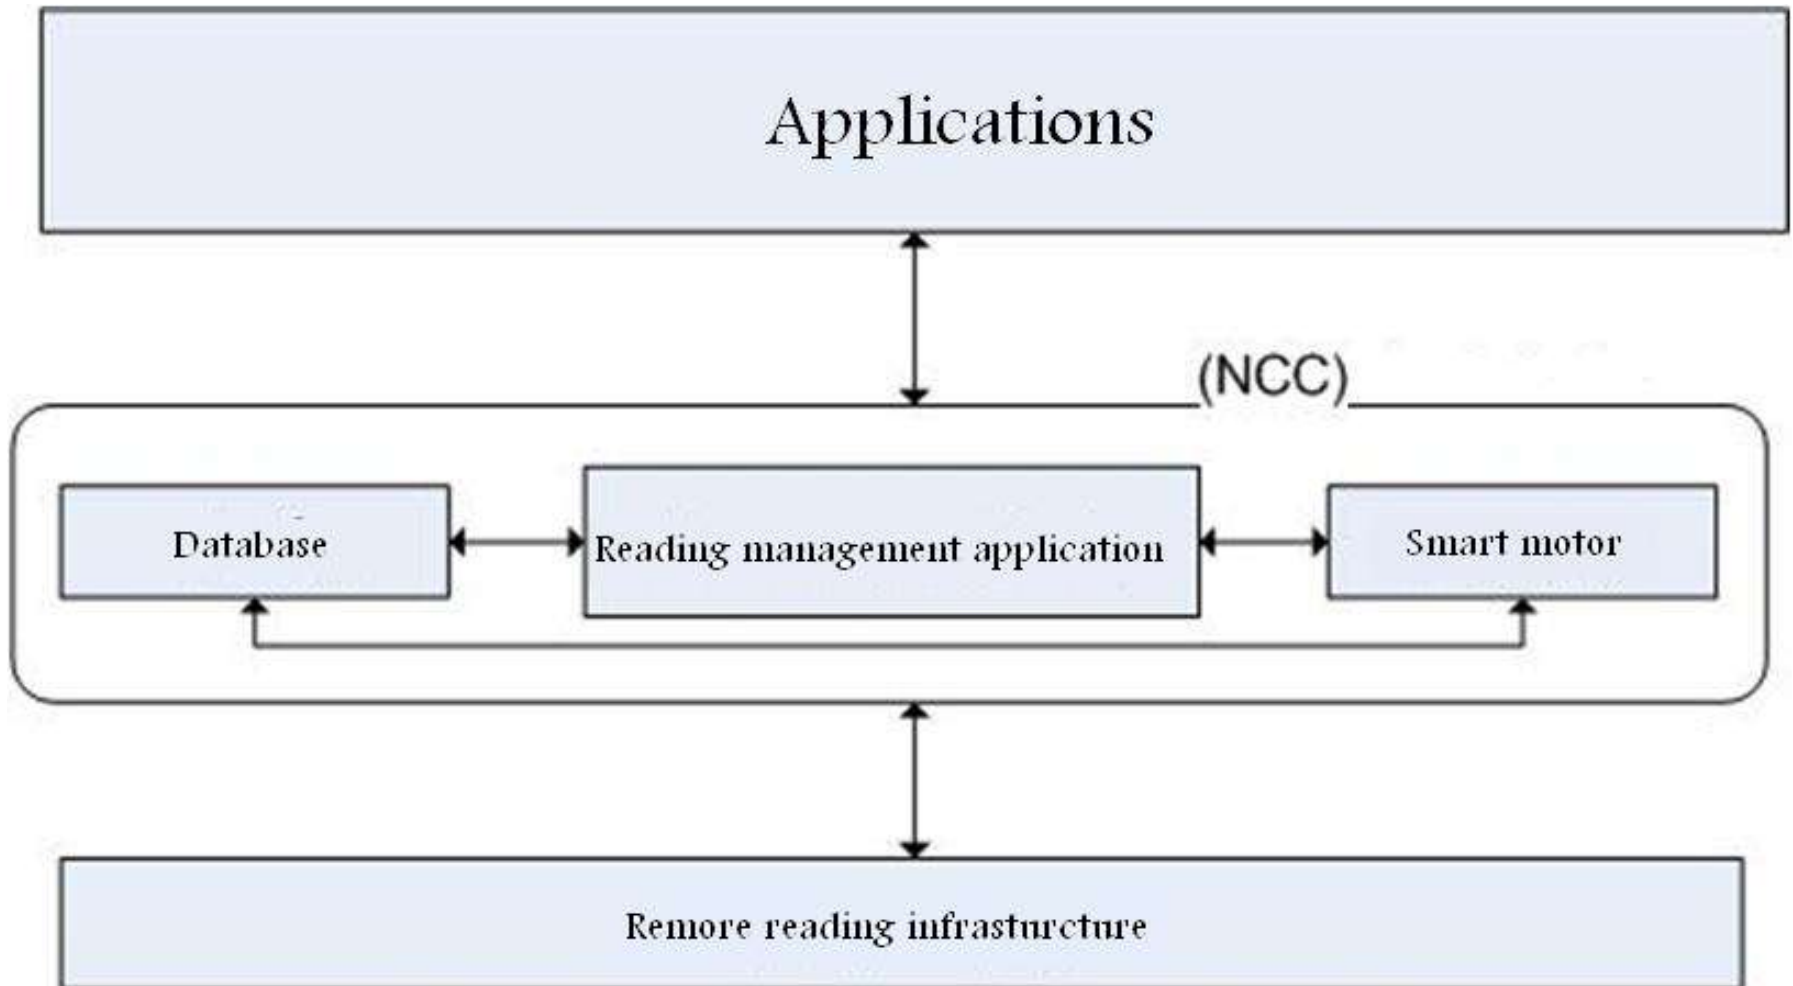

Stationary Data Collector

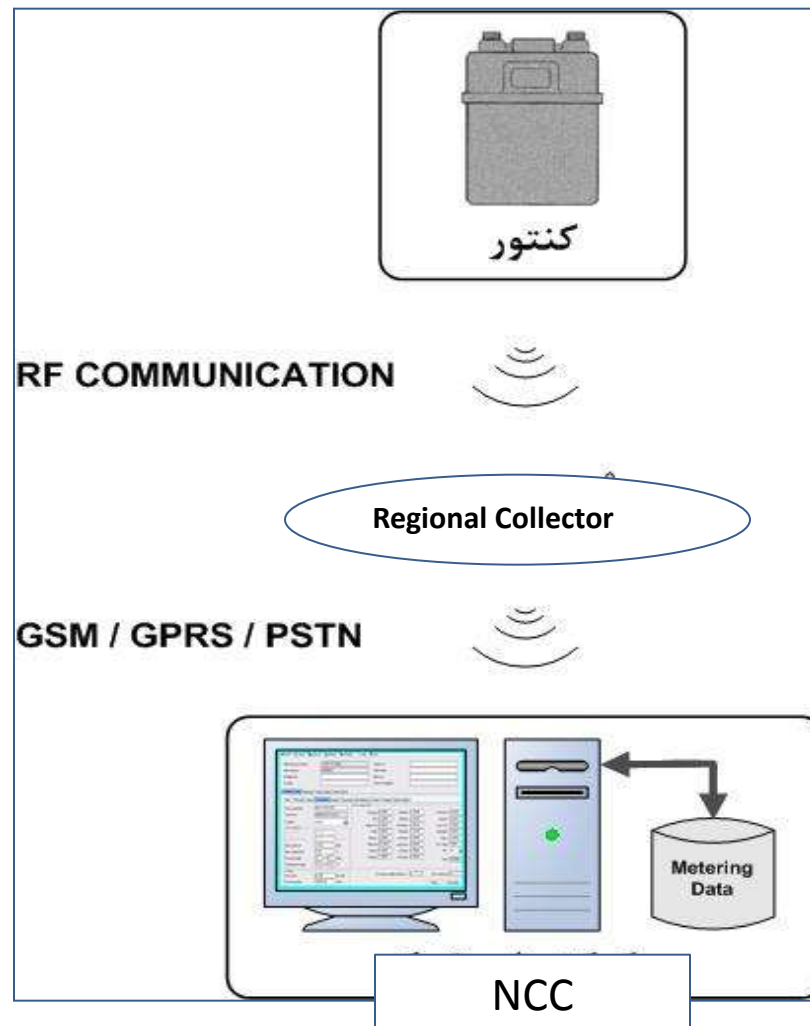

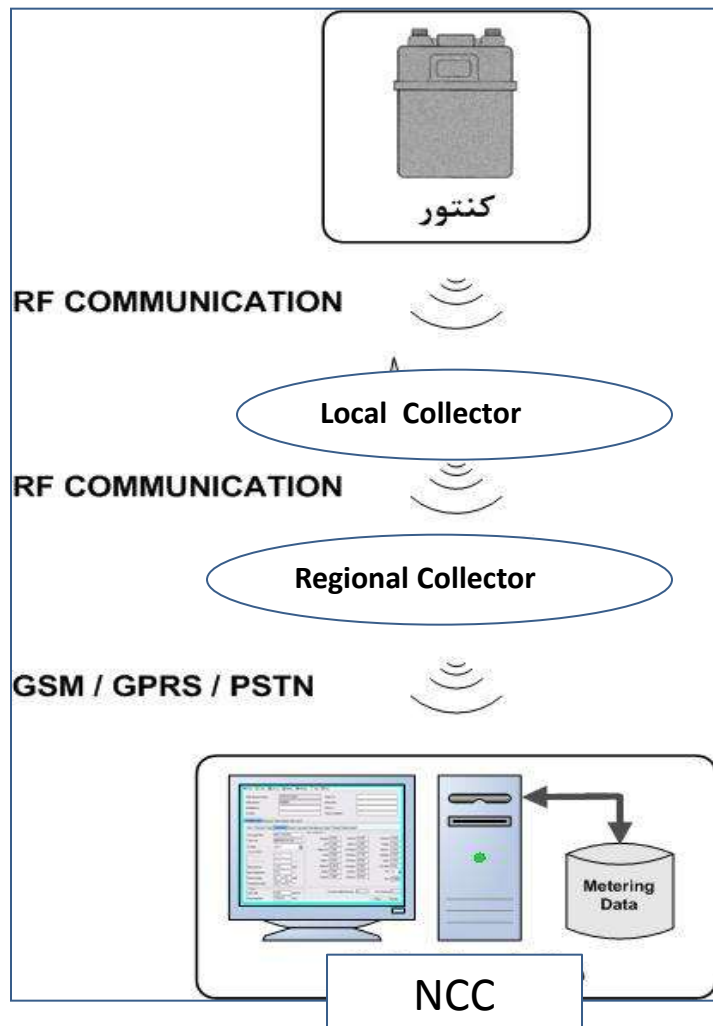

Mobile Data Collector

<i>Features</i>	<i>Advantages</i>
<i>Remote reading of gas meters</i>	<i>Reduction in the number of reading</i>
<i>Automatic reading of gas meters</i>	<i>Elimination of human errors</i>
<i>Accuracy of measurement</i>	<i>Reduction of the volume of lost gas</i>
<i>Daily collection of gas meter data</i>	<i>Flexibility in bill preparation process</i>
<i>Sending messages to the meter</i>	<i>Sending notifications to the consumers</i>
<i>Registering the numbers every hour</i>	<i>Control of consumption</i>
<i>Cut/ re-allow of gas flow</i>	<i>Consumption management</i>
<i>Alarm in case of tampering</i>	<i>Prevention of illegal consumption</i>
<i>Announcing the error in meter functionality</i>	<i>Detection and troubleshooting the defects of the meters</i>

Proposed methods

Antenna Standard Tests Results

- SWR (Standing Wave Ratio) Parameter for wide frequency range of 100 MHz to 1GHz with protective shield (Black) and without protective shield (Green)

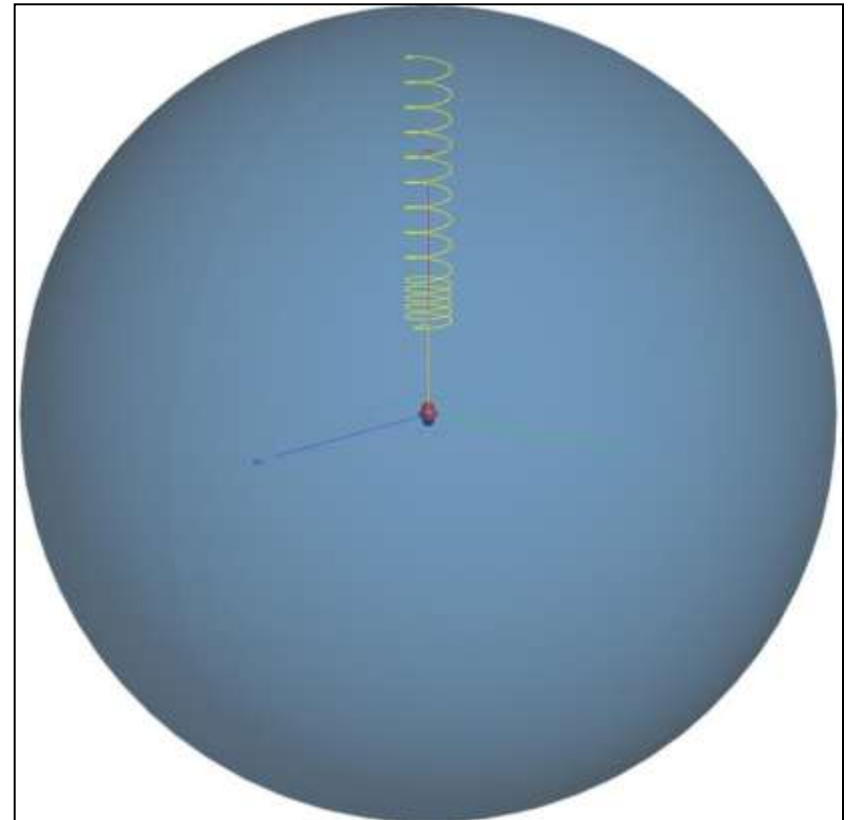

Antenna Standard Tests Results

- SWR (Standing Wave Ratio) Parameter for wide frequency range of 100 MHz to 2GHz with protective shield (Black) and without protective shield (Green)

Antenna Pattern Computation

- General antenna coverage pattern

Antenna Pattern Computation

- General antenna coverage pattern from different angle

Antenna Pattern Computation

- Antenna coverage pattern located on metal case at the middle

Thank you
