# 26<sup>th</sup> World Gas Conference

1 – 5 June 2015, Paris, France

SP 4
Current Status of Applying LCA Approach in Japanese Gas Industry

Mr. Yoshihiko Kimata Chairman, Osaka Gas Singapore Pte Ltd

# Agenda

- 1. Current status of the energy policy and global warming countermeasures in Japan
- 2. LCA approach as a strategic decision tool
  - 2-1. Objective of the LCA: Value for stakeholders
  - 2-2. Examples of LCA approaches
- 3. Challenges for the future

# Osaka Gas Singapore Group provides industrial customers with energy/cost saving services in Singapore and Thailand

NS-OG EnergySolutions (Thailand)

THAILAND

**SINGAPORE** 

**Osaka Gas Singapore** 

**City-OG Gas Energy Services** 

**OSAKA** 

#### Energy policy and global warming countermeasures in transition

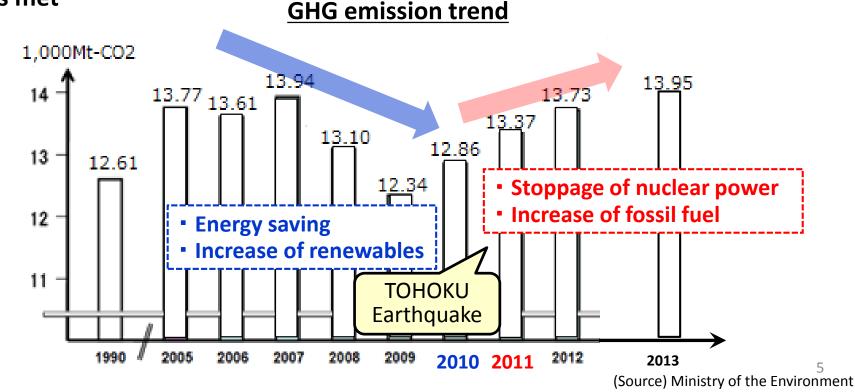

- "Basic Energy Plan" (2010)
  - Reduce GHG emissions by 25% in 2020 compared with 1990
  - > De-cabonize entire society to achieve the target
    - -Increase nuclear up to 50% and expand introduction of renewables
    - -Introduce further energy-saving measures to lower the demand

#### **TOHOKU Earthquake (2011)**

- "Innovative Strategy for Energy and the Environment" (2012)
  - Reduce dependence on nuclear and expand introduction of renewables
- Reconsideration of the policy (2013—)
  - Revision of GHG emission reduction target for 2020 (-3.8% compared with 2005)
  - Revised "Basic Energy Plan" approved by the LDP Cabinet (2014)
  - Optimal energy mix and post-2030 GHG emission reduction target being discussed (-26% compared with 2013)

# **GHG** emission trend in Japan

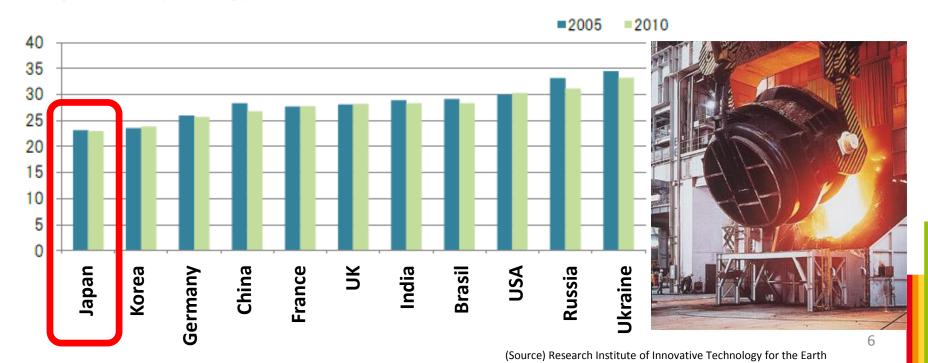

Target for the First Commitment Period (2008-12) under the Kyoto Protocol was met

# **Energy efficiency level in Japan**

#### Among the highest in the world

e.g. Primary energy consumption unit for steel furnace (GJ/t-steel)

## Goals of Japan's energy policy

#### after FUKUSHIMA disaster

No easy Jigsaw puzzle to complete

"Safety"

"Security" of Supply

"Economic" Efficiency

"Environment" Protection

No

Single

Solution

**Everybody** 

**Endorses** 

#### Goals of Japan's energy policy after FUKUSHIMA disaster

No easy Jigsaw puzzle to complete

"Safety"

"Security" of Supply

"Economic" Efficiency

"Environment" Protection

Yes!

**Society** with

Sustainable

**Energy &** 

**Environment** 

#### **Measures**

- 1. Formulate optimal "energy mix"
- 2. Develop innovative technology, engineering and marketing
- 3. Implement energy market reforms in phased steps

## Global warming countermeasures taken by the business sector

- To develop and commercialize innovative technology for higher energy efficiency,
- We need to look into the consumption phase as well as the procurement and supply phase.

 LCA approach which looks into GHG emission throughout the lifecycle is most effective.

## **Objective of the LCA: Value for stakeholders**

Emphasize the value of "avoided emissions" by low-carbon products/services

Customer

Company

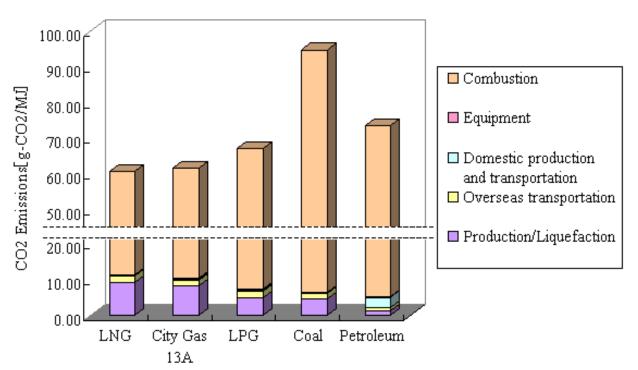

**Investor** 

Better manage business
by controlling environmental impacts
across the entire supply chain

Enhance the corporate value by the disclosure of actions mitigating global warming

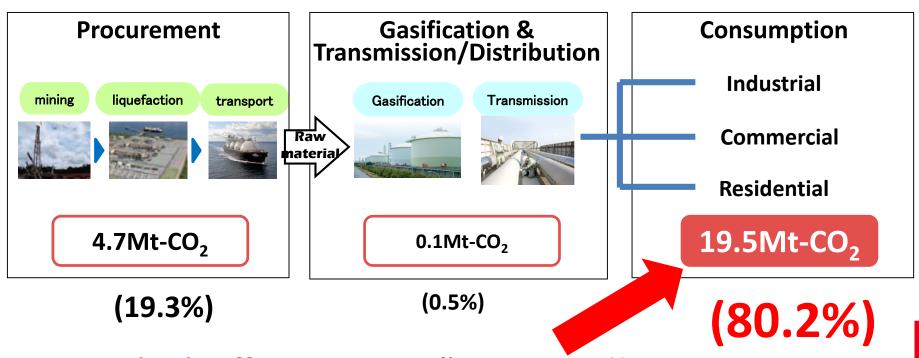

## **Customer: LCA outcome for Marketing tool**

#### LCA comparison of GHG emissions among fossil fuels

#### **Company:** Environmental impact of natural gas value chain

(Osaka Gas)

**Demand-side efforts** are critically important!!

#### **Examples of solution for GHG reduction at demand-side**

#### **Industrial market**

- Fuel conversion from oil to natural gas
- Combined Heat and Power system

#### **Commercial market**

- Combined Heat and Power system
- Gas Air Conditioning System

#### **Residential market**

- "ENE-FARM" fuel cell CHP system (often coupled with PV system)
- Condensing boiler

# Line-up of CHP (gas engine and fuel cell)

#### **Commercial market**

Miller cycle gas engine 300-800kW

#### **Residential market**

**ENE-FARM (Fuel Cell) ECOWILL (gas engine)** 

**700W** 

1kW

#### **Industrial market**

#### **GENELIGHT**

5kW

6kW

9.9kW

**25kW** 

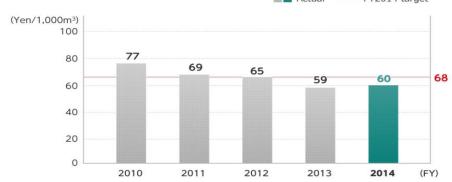

#### **Investor:** Environment Management Indicator by Osaka Gas

- Total monetary value of seven environmental impacts per gas sold
- Quantitative measure how much we reduce environmental impacts

[Legend] Environmental inpacts

# **Society:** Contribution to a low carbon society

Customer

# Society

Communicate and appeal the industry's contribution to a low-carbon society

**Company** 

**Investor** 

# **Challenges for the future**

 To make LCA a socially established approach, further measures and incentives need to be sought.

e.g.

- > PR activities for higher public acceptance
- User friendliness
- Standardization
- > Expansion of Scope of LCA toward international market

# We are ready to cooperate with IGU members for the better LCA!!

# Appendix

# Innovative technology arising from LCA outcome

#### CHP

Improvement of the efficiency of gas appliances

Eco-Jozu

Regenerative burner

Developments towards a hydrogenbased society

Developing a next-generation energy system

Hydrogen station

Smart energy network

# Combined use of natural gas and renewables

Solar power, solar thermal, biogas

# Conversion from oil to natural gas to meet industrial heat demand

Heat processing

Glassblowing

Natural gas airconditioning system

Manage energy consumption
