Committee Session 1.3

- ◆ *Suggested themes*
- ◆ *Invited chairmen*
- ◆ *SG members expected to present their results*
- ◆ *Remaining speakers from call for papers*

Committee Session 1.3 (proposal)

Will the North American gas revolution ever be reproducible elsewhere?

Chaired by

Objectives: A significant number of years have already passed ever since the unconventional gas revolution completely changed the world gas industry. Many countries are now trying to reproduce this phenomenon, as its economic benefits are significant, but progress has been limited so far. Experience in the US has demonstrated that it is vital to get the overall fiscal and regulatory framework right, and this session will explore that, aiming at the fiscal incentives, regulations and business models that could be adopted to achieve similar results in other parts of the world.

Topics of interest include

- Reasons and causes of the unconventional gas revolution;
- Regulatory and fiscal frameworks to incentivise the production of gas;
- Gas production cost and efficiency;
- Gas production taxation and allowances;

Session form: Presentation and discussion of case studies taken from the triennial report, performed by the members of SG 1.2, complemented by invited guests and authors selected from the call for papers.

Keywords: Unconventional gas, upstream regulations, upstream fiscal systems, North America, gas production costs, gas taxation, gas rent, mineral property rights, gas producing countries, gas production costs

Terima kasih!
